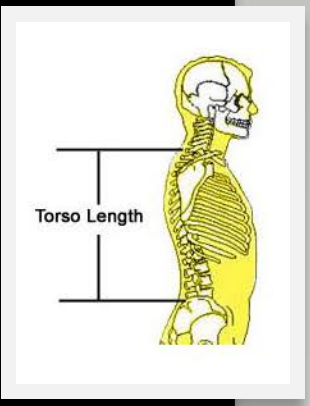
SIZING INFORMATION



All our packs have the ability to adjust to different size torso lengths and hip sizes. Below you'll see the torso and hip sizes our packs fit out of the box.

- **TORSO LENGTH: 17" TO 22"**
- **HIP SIZES: 28" TO 38"** **(HIP-BELT EXTENSION STRAP AVAILABLE FOR 39"+ WAIST SIZES)**

If you have trouble finding a pack that fits your body frame, contact our customer service department and they can help you. While our packs fit a wide arrange of people as-is, we can also custom fit our packs to specific body frame measurements. Be sure to have your measurements in hand before calling customer service. Below is how to measure yourself for a pack.

STEP 1 MEASURING YOUR TORSO

Your torso length is the distance between your C7 (the noticeable bone that stands out at the base of your neck) and the top of your hipbones. Be sure to use a soft tape when measuring and have another person measure this distance along the spine.

STEP 2 MEASURING YOUR HIPS

Using the soft tape, measure the distance around your hips. Be sure to measure your hips and not your waist for this measurement. The center of the hipbelt should ride over the top of the hipbone when fitted properly.
